

EPaCCS Outcome Report

NHS Leeds CCG

2018-19 Annual Report (Q1-Q4) - CCG Level

Data Source : SystemOne and EMIS

Data provided by : Health Care Hub (Leeds), Leeds Community Healthcare, St Gemma's Hospice and Sue Ryder
Wheatfields Hospice

Report Compiled by : Business Intelligence Team, NHS Leeds CCG

	Page
Summary	3
Part 1 - GP Practice EPaCCS Data	
C1.1a Patients who died and were included on EPaCCS - NHS Leeds CCG (Part 1 of 2)	4
C1.1b Patients who died and were included on EPaCCS - NHS Leeds CCG (Part 2 of 2)	5
C1.2a Percentage of Patients on EPaCCS who have achieved Preferred Place of Death - NHS Leeds CCG (Part 1 of 2)	6
C1.2b Percentage of Patients on EPaCCS who have achieved Preferred Place of Death - NHS Leeds CCG (Part 2 of 2)	7
Part 2 - Leeds CCGs EPaCCS Data	
C2.1 Total patient deaths in and out of hospital and total deaths by CCG	8
C2.2 Patients who died and were included on EPaCCS	8
C2.3 Preferred place of death recorded by CCG	9
C2.4 Actual place of death recorded by CCG	9
C2.5 Preferred Place of Death Achieved by Leeds CCG EPaCCS patients	10
C2.6 Duration of time (in weeks) the patients were on EPaCCS (Leeds City wide)	11

EPaCCS Outcome Report

The Electronic Palliative Care Coordination System (EPaCCS) is an electronic record that supports advance care planning conversations and improves the coordination of care for people approaching the end of life.

It provides a summary of key recommendations, preferences and information essential to the high quality care for patients with palliative care needs and those choosing to plan ahead, irrespective of prognosis. Local and national data shows that when patients are given the opportunity to discuss and share their preferences they are more likely to achieve their end of life care goals.

This is a 2018-2019 annual Leeds EPaCCS report, combining SystemOne and EMIS data for patients registered from all the practices across Leeds. To ensure a comprehensive view of advance care planning it collates EPaCCS data entered by all relevant care providers: Leeds Community Healthcare community services, hospice services, community palliative care teams in addition to primary care.

These EPaCCS reports have been produced to enable you to reflect on end of life care in your practice.

Key findings of the 2018-2019 report are:

- ◆ 45% of adults who died in Leeds had an EPaCCS record compared to 42% the previous year.
- ◆ 73% achieved their preferred place of death compared to 72% last year; with 67% dying outside of hospital compared to 62% last year.
- ◆ The proportion of patients whose EPaCCS record was started more than 3 months before they died has increased to 53% from 34% last year.
- ◆ The proportion of patients without an actual place of death recorded has fallen to 13% from 22% last year.

This report covers a period of unprecedented demand across the health and social care environment: particularly the winter period. It is a considerable achievement the proportion of patients being supported in their preferred place has been maintained whilst the overall proportion of people with an EPaCCS record has increased. This marks a sustained improvement on 2016-2017 when 33% of adults who died had an EPaCCS record.

The findings show that a greater proportion of people are being given opportunities to discuss, document and share their care preferences at an earlier stage and demonstrate improved data quality.
